

IDEAS

FILTER

Can show life expectancy
\$ vs year through
filters.

Not super informative/
waste of space as it does
not convey much.

CATEGORISE

CATEGORICAL	Quantitative/ Ordinal
- Year - Country - Region - Income group	- Life expectancy - CO2 emissions - DALYs - Health expenditure

Questions

Is this relevant enough
to the Australian public?
Does it provide enough
grounded insights into
differing life expectancy.

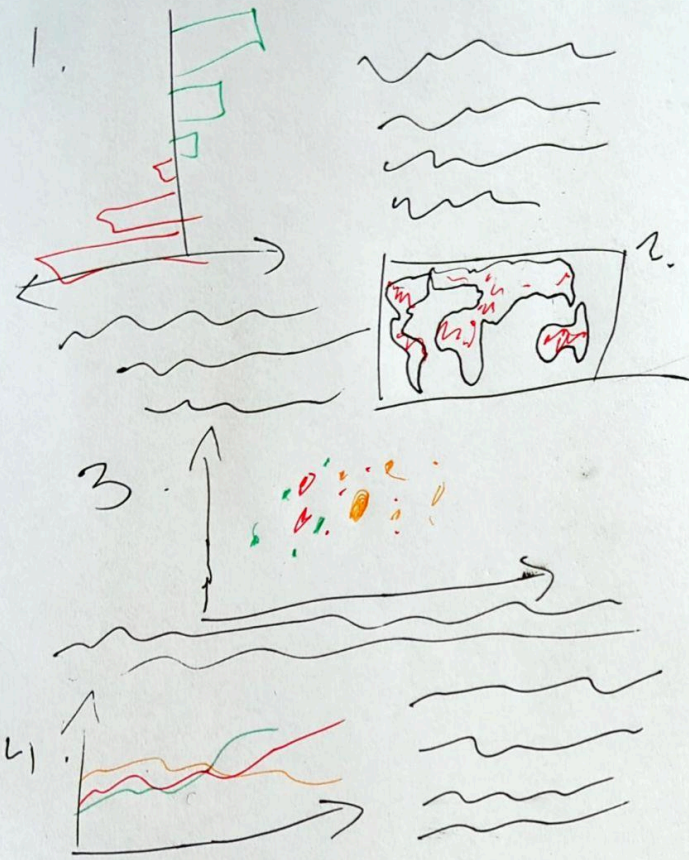

COMBINE & REFINES

Can be combined as
stacked bar charts for
show both region &
income group & their
impacts.

Sheet: 1.

LAYOUT

DISCUSSION

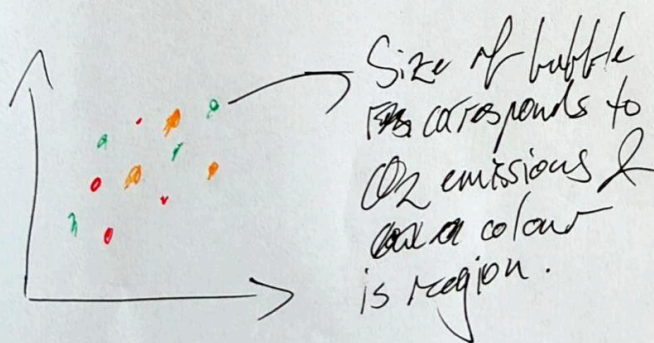

Advantages

- Is closer tied to the ~~theme~~ theme of life expectancy and the correlating factors.
- More simplistic for the average Australian viewer.
- Easy to take key insights.

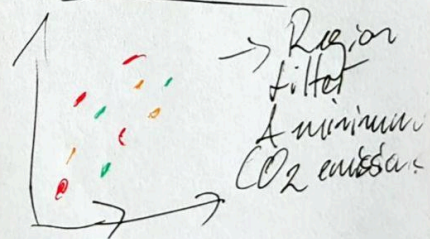

Disadvantages

- Less interactivity.
- Less visualisations.
- Less story telling.
- Might ~~be~~ have more redundancy than other layouts.

 Task: Layout 1.
 Sheet: 2

LAYOUT

DISCUSSION

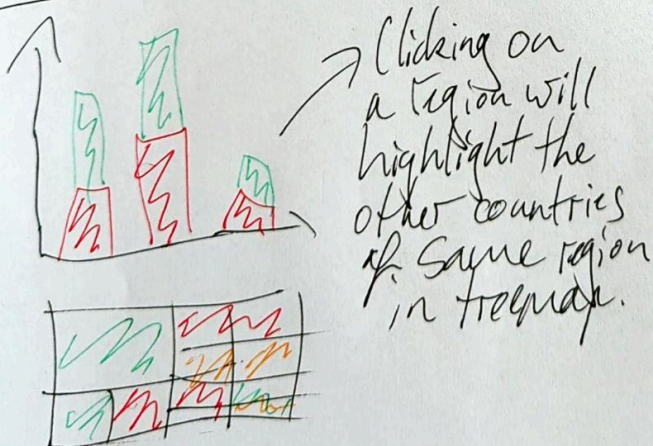

Advantages

- Very relevant at identifying global patterns
- Allows for use of interesting graphs
- Gives clarity why Australians live long.

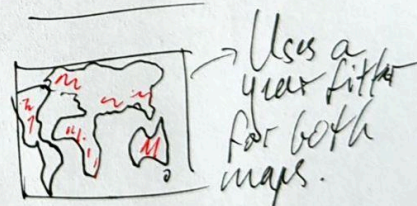

Disadvantages

- Not as many quantitative attributes to draw correlation insights from
- Less interactivity for users
- Might be hard to keep up because too much text.

 Date: 5/10/25
 Task: Layout 32
 Sheet: 3.

LAYOUT

FOCUS

Differing axes
but shows correlation
between the disease
burden, DALYs, income
group & region in
an intuitive manner

DISCUSSION

Advantages

- Provides a more quantitative view about different life expect & its factors.
- Have more cross interacting.
- Strong storytelling.
- Intuitive layout.

Disadvantages

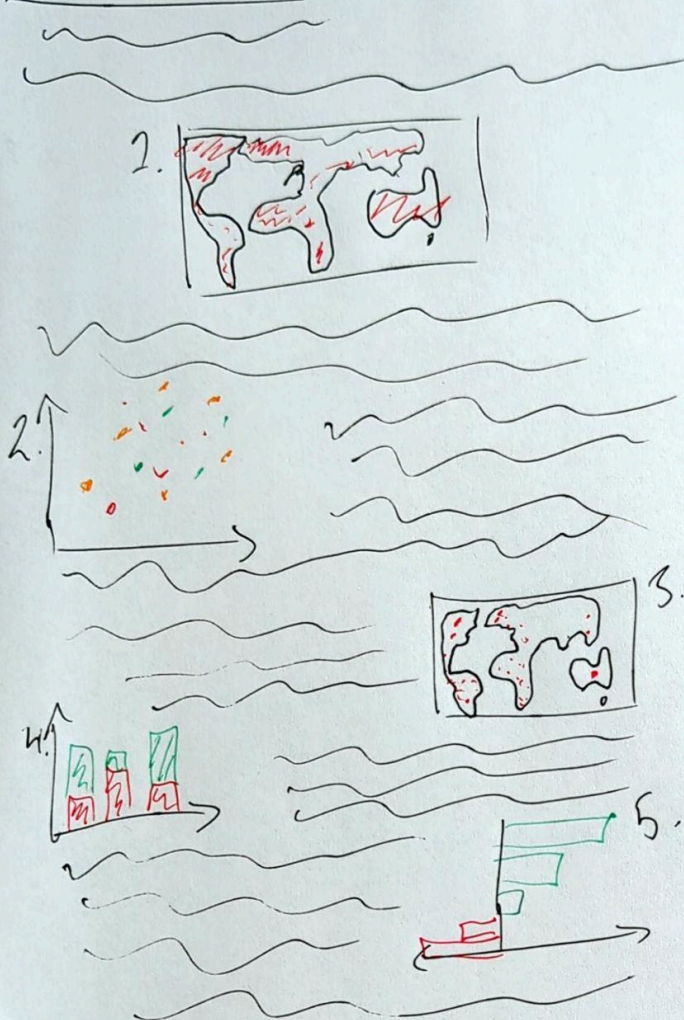

- It is more technical than other layouts.
- Might be too clustered too information dense so it can be hard to make key takeaways for readers.

OPERATION

There will be a year slider that affects all graphs. The stacked bar charts will filter by region together too.

Topic: layout 3
Sheet: 4.

LAYOUT

FOCUS

• Life expectancy across the globe is the central focus.

• There is no main focus in this dashboard as all parts play pivotal role.

• Story telling and key insights are the pivot points of this dashboard as all visualisations tie together to depict a whole story.

Author: Thomas Higgins.
Date: 5/10/25
Task: Final Layout
Sheet: 5, ID: 33846839.

DETAILS

Dependencies:

Reliant on Github pages to host the visualisation dashboard.

Estimated effort:

This will likely take a bit over a week:
1-2 days for sorting, combining & cleaning datasets.
3-4 days for creating the visualisations.

3 days for creating and styling the dashboard.

Specifications-

less visualisations but more meaningful ones provide deeper & clearer insights.

OPERATION

Every graph will be year filterable.

2. Will have region & CO2 filters

4. Region filters

5. Region & income group filters.
